

GLP-1 Receptor Agonist Weight-Loss Response Variability - Literature Review Sample

This is a mock PDF bundled with the use-case export for preview testing. In a real export this would be a literature attachment fetched by the agent during the session.

Key findings:

- Response variability is 10-18% across cohorts.
- Gut microbiota and bile acid axes mediate GLP-1 secretion.
- Multi-omics features improve prediction AUC from 0.64 to 0.83.

Page 2 - Methods

PubMed queries were executed through the notebook runtime, metadata for 55 candidates was extracted, and 26 abstracts were read in full. Modeling used synthetic cohort data with L2-regularized logistic regression and repeated cross-validation.
